every shade

FREE TALK FOR SENIORS · ON ZOOM

Skin cancer doesn't look the same on everyone.

Join a free 45-minute talk from your own home. Learn how to spot skin cancer early on every skin tone, and how to check your skin yourself.

What you'll learn

- What melanoma and other skin cancers are
- What raises your risk: sunburns, sun exposure, family history, and age
- What warning signs look like on light, medium, and dark skin
- The spots people miss: palms, soles of the feet, and under the nails
- How to do a simple skin check at home
- Where to go if something looks wrong, with time for your questions

Check your skin once a month

Look head to toe in good light, with a mirror or a family member's help.

See a doctor about any spot that is **new, changing, bleeding,** or **not healing**, or a **new dark line in a nail**.

How to join

Email or call us, and we'll send you the date and Zoom link.
